

SEPARATOR FILTER

MODEL **SF1** STAINLESS STEEL

FILTER WITH BUILT-IN CYCLONE SEPARATOR

Features

All stainless steel separator filter efficiently removes condensate and impurities from the flow medium. Suitable for applications requiring high-quality dry steam, and non-hazardous gas mains.

1. Built-in cyclone separator eliminates condensate, dirt and scale before filtering, extending filter maintenance cycle.
2. Separator achieves condensate separation efficiency as high as 98%.
3. Easy-to-clean five layer sintered wire mesh filter maintains extremely low pressure drop for extended periods.
4. Compact and lightweight.
5. Ferrule joint clamp facilitates cleaning and disassembling, reducing maintenance costs.

Pressure Equipment Directive (PED)

Classification according to PED 2014/68/EU, fluid group 2

Size	Category	CE marking
DN 15 to DN 40	—*	Art. 4, Sec. 3 (sound engineering practice), CE marking not allowed
DN 50	I	With CE marking and Declaration of Conformity

* Manufactured in accordance with sound engineering practice

Specifications

Model	SF1		
	Screwed	Socket Welded	Flanged
Connection			
Size	1/2", 3/4", 1", 1 1/2", 2"	DN 15, 20, 25, 40, 50	
Washing/Pressure Detection Port Connection	1/2" Screwed		
Condensate Outlet Connection	1/2" Screwed		
Maximum Operating Pressure (barg)	PMO	10	
Maximum Operating Temperature (°C)	TMO	185	
Nominal Filter Rating ¹⁾ (µm)	0.5, 2, 5, 10 ⁴⁾ , 40 ⁴⁾		
Filter Construction	Five layer Sintered Wire Mesh		
Internal & External Finishing ²⁾	Acid Cleaning (lost-wax cast)		
Applicable Fluids ³⁾	Steam, Air		

¹⁾ Consult TLV for other available filter ratings ²⁾ Optional electro-polishing (lost-wax cast) available on request 1 bar = 0.1 MPa

³⁾ Do not use for toxic, flammable or otherwise hazardous fluids ⁴⁾ Optional

PRESSURE SHELL DESIGN CONDITIONS (**NOT** OPERATING CONDITIONS): Maximum Allowable Pressure (barg) PMA: 10
Maximum Allowable Temperature (°C) TMA: 185

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

Configuration

No.	Description	Material	DIN ¹⁾	ASTM/AISI ¹⁾

Steam Pressure Loss

● 0.5 µm Filter

● 2 µm Filter

● 5 µm Filter

● 10 µm Filter*

● 40 µm Filter*

* Option

These pressure loss charts are based on a steam pressure of 1 barg. For other pressures, multiply the steam flow rate by the correction factor given in the table right. Use the result on the pressure loss chart.

Pressure (barg)	1	2	3	4	5	6	7	8	9	10
Flow Rate Correction Factor	1.0	0.83	0.72	0.65	0.60	0.56	0.52	0.49	0.47	0.45

Steam Flow Rate

The chart to the left is used to determine the steam flow rate through the SF1 separator-filter. It is based on a steam velocity in the piping of 30 m/s. For other cases, use the equation below and replace "v" with your steam velocity:

$$\text{Effective flow rate} = \text{Flow rate}_{30 \text{ m/s}} \times \frac{v}{30}$$

It is recommended that steam velocities not exceed 30 m/s.

Note: For pressure loss and flow rate of air, contact TLV.
